

## > Dimensions Administration: Web

Duration: 2 days

### ■ Introduction

This course covers more advanced features of mrInterview, such as creating your own HTML templates to achieve a custom look for your surveys, setting up permissions for the web-based applications, and understanding how to manage your respondents with the sample management features.

### ■ Course Content

Areas covered will include:

- Understanding the Permissions aspects of DimensionNet
  - mrInterview has its own built in security with the DimensionNet interface. This can be security around certain applications (such as activating projects vs. Reviewing Topline Information), or around specific projects
- Creating and modifying mrInterview templates
  - HTML and XML templates are used to customize the look and feel of your surveys
- Sample Management with mrInterview
  - Discussions will include how to create a sample table through SQL, accessing additional data stored in a sample table, reviewing the functionality of the provided sample scripts
- Quota Control with mrInterview
  - Learn how to set up and maintain both script and sample quotas with mrInterview.

### ■ Target Audience

Staff that will be involved in creating the HTML templates to control the look of the mrInterview surveys; staff who will be managing the security of the DimensionNet application that comes with mrInterview; and staff involved with creating and managing sample and involved with the authentication of respondents.

### ■ Prerequisites

Knowledge of .html would be helpful, but not necessary for the template section.
